

English 12 Practicing APA Style Quotations, Citations and References Name:

Use the following quote and information about the quote’s source to complete the numbered tasks.

Source: Frankenstein: City of Night by Dean Koontz, published in 2005, in the U.S. The publisher is Bantam Books.

“By the introduction of certain canine genes, Nick’s maker had given him a sense of smell approximately half as sensitive as that of a dog, which meant he enjoyed olfactory perceptions ten thousand times more powerful than those of the average human. To a dog, few scents cause revulsion. Many are good and nearly all are interesting.” (from p. 83)

- 1. Create an integrated and correctly cited quote, with your tag at the beginning or introducing the quote, according to the rules provided on the APA handout.

- 2. Create an integrated and correctly cited quote, with your tag at the end of the sentence.

- 3. Create an integrated quote where the square brackets have been used to change some aspect of the quote.

- 4. Create an integrated quote where ellipses points are used to leave out some aspect of the quote.

Use the following quote and information about the quote’s source to complete the numbered tasks.

Journal Title: The use of human tissue in bone grafting technique
Date Issued: Oct. 3, 2006, VOL: 102, ISSUE: 40, PAGE NO: 23,
Author: Terry Hainsworth

The process of bone transplantation is not new. It originated in the mid-19th century when the osteogenic properties of bone was first studied. As early as 1881 a Glasgow surgeon described the use of bone grafts in reconstructing a child’s humerus and the first reported use of preserved bone in orthopaedic surgery was in 1942 (Carter, 1999).

The materials used in bone graft techniques today may be transplanted from the patient’s own bones (autograft) or come from a donor (allograft). Following autograft, patients will have two wound sites, one from the original surgical intervention and another from the donor site. This adds considerably to postoperative pain and discomfort as well as making the surgical procedure longer and more complex (North American Spine Society, 2006).

Autograft bone is regarded as one of the safest to use due to the low risk of disease transmission as well as a better chance of acceptance and effectiveness in the transplant site. This is because it contains the greatest amount of the patient’s own bone-growing cells and proteins. Therefore autograft bone provides a strong framework for the new bone to grow into (North American Spine Society, 2006).

- 5. Create an integrated (which means that the quote has to be seamlessly blended into your own sentence) and correctly cited quote, with your tag at the beginning or introducing the quote, according to the rules provided on the APA handout.

- 6. Create an integrated and correctly cited quote, with your tag at the end of the sentence.

- 7. Create an integrated quote where the square brackets have been used to change some aspect of the quote with a split citation.
